

STAPLE THIS TO THE FRONT OF YOUR BINDER PAPER!

- **Pick 20 questions you got wrong** (If you got less than 20 wrong, do as many as you got wrong)
- **For each question do the following**
 - Write the question number
 - COPY THE ENTIRE QUESTION DOWN
 - Write out the ENTIRE answer that you put that was incorrect
 - Write out the ENTIRE answer that you now think is correct
 - Show all parts of the calculation if it is a calculation problem, or provide a FULL explanation as to why that is the correct answer.

*IT MUST BE A GOOD EXPLANATION,
OR A FULL CALCULATION
TO RECEIVE ANY CREDIT FOR THE PROBLEM!*

EXAMPLE:

#22 – How many significant digits are in: 0.000523500

INCORRECT ANSWER: 4

CORRECT ANSWER: 6

EXPLANATION: Leading zeros do not count, but trailing zeros do. Therefore the only significant digits in the number are the underlined ones: 0.000523500 which leads to the number having 6 significant digits

YOUR ANSWERS MUST BE FORMATTED JUST LIKE THE EXAMPLE!!!!

FINISHED EARLY???

If you finish early, come get a manila folder from me and start sorting through your notebook. Write the following on the tab:

Last name, First name, Class period

Put anything you do not want in your binder in the folder. You will leave this folder in class in case you ever need anything out of it. THINK HARD about what you might want to keep in your notebook. Which things do you think will be helpful for you this term?

This will be part of your homework assigned tomorrow.
